

Steven Harris, MD, FACP – Program Director

Dr. Harris is a board-certified internist and endocrinologist with a subspecialty focus on osteoporosis, metabolic bone disease and disorders of mineral metabolism. He received his medical degree from the University of California, San Francisco, and completed a residency and chief residency in Internal Medicine at the same institution.

He completed a clinical and research fellowship in Endocrinology and Metabolism at Massachusetts General Hospital in Boston. In 1983, he returned to the University of California, San Francisco, where he is a Clinical Professor of Medicine. Dr. Harris has spent many years working on a variety of clinical research projects to examine the effects of nutrition, calcium supplements, vitamin D, hormone therapy, bisphosphonates, calcitonin, PTH (parathyroid hormone) and SERMs (selective estrogen receptor modulators) upon the prevention and treatment of osteoporosis. Dr. Harris maintains an active consultative practice in metabolic bone disease, but is also engaged in a wide variety of educational initiatives related to osteoporosis.
