

Ajai Chari, MD, PhD, is Director of the Multiple Myeloma Program and Professor of Clinical Medicine at University of California San Francisco (UCSF). His clinical interests include plasma cell disorders (including multiple myeloma), AL amyloidosis, POEMS syndrome, plasmacytoma, and monoclonal gammopathies of uncertain significance. He has published extensively on these topics and is frequently invited to speak regionally, nationally, and internationally.

Dr. Chari's research interests include the development of novel chemotherapy regimens. He is principal investigator (PI) of several investigator-initiated trials as well as the national and international PI of several industry-sponsored studies. As the Director of Clinical Research in the Multiple Myeloma Program at UCSF, he oversees a program renowned nationally not only for high volume patient accruals but also rigorous quality assurance.
